

Sojourner Health Clinic- Dispensary Guide

Please see formulary for a list of medications available in clinic or for ordering as needed. If a medication is unavailable at the dispensary, the attending physician may decide to write a prescription for the patient, as appropriate.

If you have any questions, please ask the dispensary or clinic manager.

After I see my patient, what should I do?

- Establish the patient's medical plan, document desired therapy and the indication for each medication
- Confirm with the dispensary that each drug, strength, and quantity needed is available. Work with attending and dispensary to change dosing or therapy as needed.
- Write med list with frequency, dose, and any key administration info.
- Prescriptions should be written for a quantity of 28 days, or multiples of 7 days if lower amount of drug in stock.
 - ➔ Think about frequency of dosing or if drug is PRN
 - ➔ If therapy is PRN, they still need to know a frequency (TID, Q8H)
 - ➔ BID = 56, TID= 84
- Confirm with the attending on treatment plan then place folder on the bottom of rack on dispensary cabinet.
- When the dispensary is completed, the patient record and tote of meds will be pushed to the front of the table for the attending to review.

*** Remember to include frequency, dose, days for acute use, any max total daily dose (PRN), & indication!!

Patient Assistance Program

If your patient needs an inhaler for chronic respiratory issues, please work with the Patient Assistance program to get your patient signed up.

If your patient is expecting an inhaler or requests a refill, the patient assistance program may have received it already.

Available inhalers for order:

Asmanex HFA- mometasone; Dulera -formoterol/mometasone; Proventil HFA -albuterol
